While a few of the other tools are similarly beloved by many Photographers, it's the multi-tool conversation lifter that is the ultimate tool. No other tool comes close, really. The Options panel alone is a curated collection of depth-of-field and resolution-widening tools that power professionals with their day-to-day workflows. From there you can also even spin off a new panel to create your own custom parameters. Applying a Lightroom Preset to one of your assets? PS can now automatically check the image for relevant Photos and measure it to see if you have the right space to preview it. Also, a Preset will always display the Assets panel, so your rules under the Options panel will always be at the ready when needed. And if you want more automation and feedback, you can even label your assets in Lightroom, export a Favorites list of images to import, and import that list along with your presets directly into Photoshop. This is all simplifying the post-processing workflow, which will only get more and more complex as time goes on. Lightroom's Adobe Express codecs are on version 3.9.x and Lightroom CC uses the same encoders except it does not support on a single line output. This

means that when you use the Lightroom > File > Export Preset or Export as Action for export to Adobe Premiere, you get an advanced codec with the option of choosing between the very best output that you have from any codec supported by Lightroom. You don't get a one-line output with advanced quality and speed at a much lower file size. So if Premiere is your workflow, the Express presets will give you a native codec for all the editing except exporting a single time-stamped video with your preset applied, which I think doesn't need to be a single-line codec it.
